

*We bring plants to people*

Company profile

**ASW  ATI**

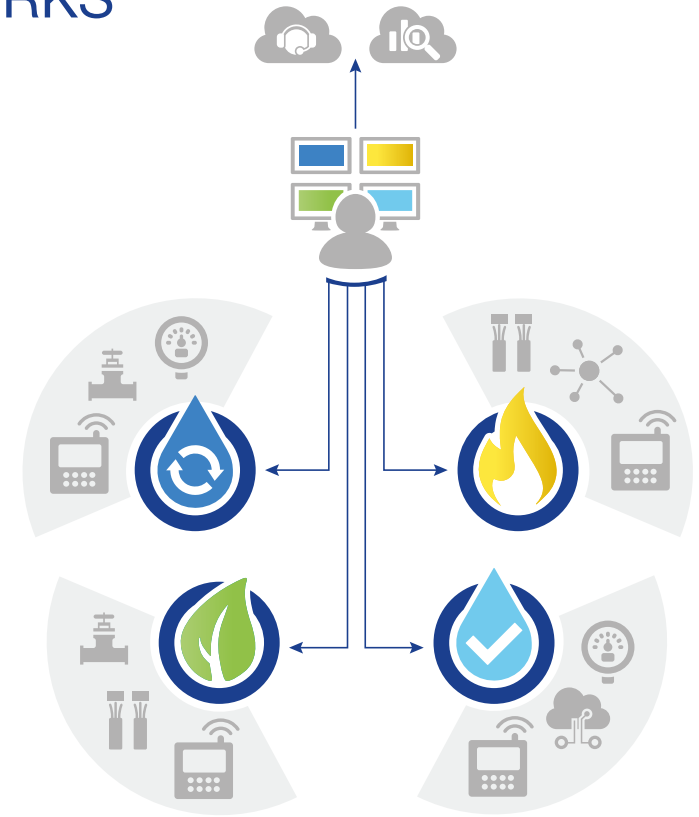

# REMOTE CONTROL OF WATER AND GAS NETWORKS

*Physical to digital and back*

From the field to the control center, ASW-ATI supports utilities' efforts to save energy, environmental and human resources with engineering, expertise and innovation.

We use advanced technologies to build asset control, monitoring and automation systems.

Our systems are designed to fit the processes, territories and reference sectors.

*We bring plants to people*

Scalable solutions

Open protocols

Industry standards

# The technology partner on your side

*Solutions driving to the future*

## INTEGRATED WATER CYCLE

We support utilities in the reduction of the Non-Revenue Water level and ensuring the continuity of their services. Monitoring and asset control along the network, management efficiency and operational safety.

## GAS NETWORKS

We guarantee energetic efficiency for the preheating process, supporting the monitoring and management of the plants. Reduction of anomalies, operation's efficiency and data analysis.

## DRAINAGE AND IRRIGATION

We support the water authorities by controlling the operation of the network, from supply to final distribution. Better use of human resources, hydraulic safety of lands and people.

## MINERAL WATER

We ensure continuity of production with particular care to the safety quality. Complete and reliable measurements of the production process, from the springs flow rate to water quality.

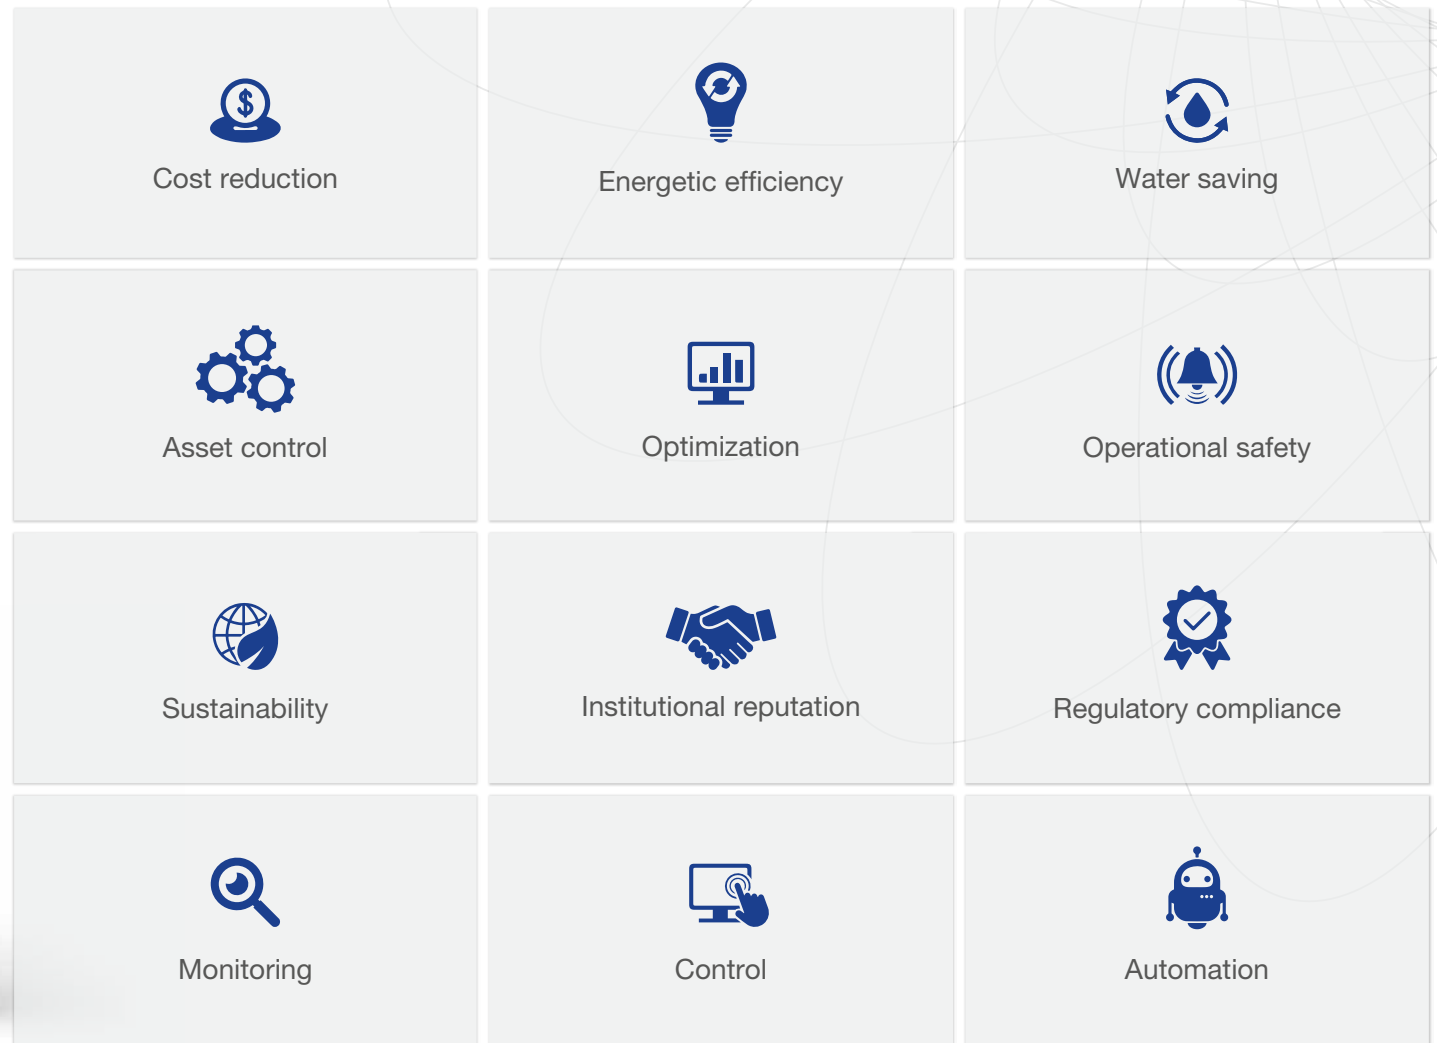

# We create value from data

We operate with a mix of theoretical knowledge and experience coming from the field and constant curiosity towards the future.

That same focus on improvement pushes ASW-ATI to invest in young talents and R&D activities.

*We deliver smart solutions of AVK quality that empower every utility to save water, energy and human resources in the operation of their hydraulic systems*

ASW-ATI is a company of the AVK Group.

We continue to enrich the application experience in SCADA systems, and we develop the AVK Smart Water project, based on the leading IoT technologies.

We integrate the best of the two experiences to ensure the most effective solutions to our Customers.
